Automobile wiring harness is the main body of the network of automobile circuit. Without wiring harness, there is no automotive circuit. Wire harness refers to the contact terminal (connector) made of copper punching and wire and cable compression, after the outside remolding pressure insulation or external metal shell, with wire harness bundle to form a connection circuit components. The wire harness industry chain includes wire and cable, connectors, processing equipment, wire harness manufacturing and downstream application industry, the wire harness is widely used, can be used in automobiles, household appliances, computers and communication equipment, various electronic instruments and other aspects, the body wiring harness connects the whole body
